Chapter 6. □□□

□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□.

6.1. New in Spring Data Redis 2.3

- Template API □□□□ `Duration` □ `Instant`.
- Stream Commands □□.

6.2. Spring Data Redis 2.2

- Redis Streams
- □□□□ keys □□□ `union`/`diff`/`intersect` □□□□
- □□□ Jedis 3.
- □□□□□ Jedis Cluster □□□□□□□□□.

6.3. Spring Data Redis 2.1

- □□ Lettuce □ Unix domain socket □□
- Lettuce □□□□,□□□
- □□□□
- `@TypeAlias` □□ Redis □□□.
- Cluster-wide `SCAN` using Lettuce and `SCAN` execution on a selected node supported by both drivers.
- Reactive Pub/Sub to send and receive a message stream.
- `BITFIELD`, `BITPOS`, and `OBJECT` command support.
- Align return types of `BoundZSetOperations` with `ZSetOperations`.
- Reactive `SCAN`, `HSCAN`, `SSCAN`, and `ZSCAN` support.
- Usage of `IsTrue` and `IsFalse` keywords in repository query methods.

6.4. New in Spring Data Redis 2.0

- Upgrade to Java 8.
- Upgrade to Lettuce 5.0.
- Removed support for SRP and JRedis drivers.
- Reactive connection support using Lettuce.
- Introduce Redis feature-specific interfaces for `RedisConnection`.
- Improved `RedisConnectionFactory` configuration with `JedisClientConfiguration` and `LettuceClientConfiguration`.

- Revised `RedisCache` implementation.
- Add `SPOP` with count command for Redis 3.2.

6.5. New in Spring Data Redis 1.8

- Upgrade to Jedis 2.9.
- Upgrade to `Lettuce` 4.2 (Note: Lettuce 4.2 requires Java 8).
- Support for Redis GEO commands.
- Support for Geospatial Indexes using Spring Data Repository abstractions (see □□□□□□).
- `MappingRedisConverter`-based `HashMapper` implementation (see Hash □□).
- Support for `PartialUpdate` in repositories (see □□□□□□).
- SSL support for connections to Redis cluster.
- Support for `client name` through `ConnectionFactory` when using Jedis.

6.6. New in Spring Data Redis 1.7

- Support for RedisCluster.
- Support for Spring Data Repository abstractions (see Redis □□□).

6.7. New in Spring Data Redis 1.6

- The `Lettuce` Redis driver switched from wg/lettuce to mp911de/lettuce.
- Support for `ZRANGEBYLEX`.
- Enhanced range operations for `ZSET`, including `+inf` / `-inf`.
- Performance improvements in `RedisCache`, now releasing connections earlier.
- Generic Jackson2 `RedisSerializer` making use of Jackson's polymorphic deserialization.

6.8. New in Spring Data Redis 1.5

- Add support for Redis HyperLogLog commands: `PFADD`, `PFCOUNT`, and `PFMERGE`.
- Configurable `JavaType` lookup for Jackson-based `RedisSerializers`.
- `PropertySource`-based configuration for connecting to Redis Sentinel (see: Redis Sentinel □□).

While redirects for specific keys to the corresponding slot-serving node are handled by the driver libraries, higher-level functions, such a s collecting information across nodes or sending commands to all nodes in the cluster, are covered by `RedisClusterConnection`. Picking up the keys example from earlier, this means that the `keys(pattern)` method picks up every master node in the cluster and simultaneously executes the `KEYS` co mmand on every master node while picking up the results and returning the cumulated set of keys. To just request the keys of a single node `RedisClusterConnection` provide s overloads for those methods (for example, `keys(node, pattern)`).
